Chibuike Maduabuchi - Design Engineer

LinkedIn ↗ Email ↗ Dribbble ↗ Portfolio ↗ GitHub ↗

Design Engineer working across product design and frontend engineering. I design and build React, Next.js, and TypeScript products for complex workflows, with a focus on healthcare, fintech, dashboards, forms, data-heavy interfaces, and accessible product systems. My strongest current work is Medibridge, a healthcare platform for AI-assisted patient onboarding, structured medical records, and hospital-to-hospital record transfer workflows.

WORK EXPERIENCE

ROBOTO STUDIO

Remote

Design Engineer

August 2026 – Present

- Design and build production web experiences for client and internal products using React, Next.js, TypeScript, Tailwind CSS, and modern frontend tooling.
- Translate Figma designs and product requirements into responsive, accessible, and reusable interfaces with strong attention to interaction quality and implementation detail.
- Work across design and engineering, contributing to interface architecture, component systems, frontend implementation, and product iteration.
- Build complex UI patterns including responsive layouts, navigation systems, interactive states, animations, forms, and reusable components.
- Contribute to internal R&D exploring AI-assisted product development, design-to-code workflows, developer tooling, and automated interface auditing.
- Collaborate with designers and engineers to identify implementation issues, refine product behavior, and improve the quality of shipped interfaces.

INDEPENDENT DESIGN ENGINEERING PRACTICE

Remote

Design Engineer / Product Engineer

December 2024 – August 2026

- Designed and built web applications end to end using React, Next.js, TypeScript, Tailwind CSS, and modern frontend architecture.
- Built Medibridge, a healthcare record management platform for AI-assisted patient onboarding, structured clinical records, and hospital-to-hospital record transfers.
- Built complex interface patterns including dashboards, tables, filters, drawers, modals, multi-step forms, empty states, loading states, and validation flows.
- Implemented form-heavy workflows with React Hook Form, Zod, reusable components, and state management patterns.
- Worked with backend-connected interfaces using Drizzle ORM, PostgreSQL, Supabase, Neon, Better Auth, TanStack Query, and SWR.

SELECTED PROJECT

Medibridge - Healthcare record management platform Link

Medibridge is a healthcare platform for digitizing patient records, managing structured clinical information, and supporting hospital-to-hospital record transfers.

- Designed the product experience for patient onboarding, record review, patient profiles, medical history, diagnoses, medications, allergies, lab results, and transfer approval.
- Built the whole product, from the interface to the API and database, using React, Next.js, TypeScript, React Hook Form, Zod, Drizzle ORM, PostgreSQL, and Better Auth.
- Designed AI-assisted extraction as a review-first workflow: nothing is saved until staff confirm it, each extracted record stays linked to its source document, missing values stay empty, and a failed document can be retried on its own.
- Structured patient records into clear clinical sections to make information easier to review, update, export, and transfer.
- Designed transfer flows for sharing selected patient records with external hospitals through approval-based access.
- Created interaction patterns for complex healthcare states, including empty states, validation errors, loading states, filtered tables, pagination, and read-only views.
- Explored product decisions around clinical safety, data accuracy, access control, auditability, and continuity of care.

KULIPAL TECHNOLOGIES LIMITED

Lagos, Nigeria

Product Designer

January 2024 – May 2025

- Designed product flows and mobile interfaces for a consumer platform across food, events, housing, and branch management workflows.
- Conducted user research through interviews, surveys, usability testing, and stakeholder conversations to identify user needs and product friction.
- Created wireframes, prototypes, high-fidelity mockups, and interaction flows in Figma for mobile and web experiences.
- Led the design of the Branch Management feature, focusing on clarity, accessibility, responsive behavior, and reduced cognitive load.
- Collaborated with frontend developers to support implementation quality, visual consistency, and responsive interface behavior.
- Designed web pages, mobile layouts, and email notifications with clear hierarchy, responsive formatting, and product-aligned visual direction.

EDUCATION

UNIVERSITY OF NIGERIA, NSUKKA

Bachelor of Engineering, Civil Engineering

First Class Honours

CHECKLEARN

UI/UX Design Course, Experienced Batch

SKILLS & TOOLS

DESIGN ENGINEERING

- Product design
- UX design
- UI Engineering
- Interaction Design
- Design Systems
- Information Architecture
- Prototyping
- Accessibility
- Responsive Design

FRONTEND ENGINEERING

- React
- Next.js
- TypeScript
- HTML
- CSS
- Tailwind CSS
- CSS Modules
- Framer Motion
- React Hook Form
- Zustand
- Zod
- TanStack Query
- SWR

BACKEND & DATA

- Node.js
- Express
- PostgreSQL
- Drizzle ORM
- Supabase
- Neon
- Better Auth
- Firebase

TOOLS

- Figma
- Git
- GitHub
- Vercel
- Codex
- Claude Code
